Services

Parking Management Systems.

Sourcenets has developed a brilliant parking solution for both municipalities, cities, airports, commercial buildings and street parking known as ParkSoul.

ParkSoul is a mobile and a web-based application devised to streamline car parking operations. We focus on utilizing modern technology to simplify revenue collection in the parking industry.

The Parking Management System constitutes the access control system, revenue management, security system, boom barrier and statistical information.

Here are the components of Parksoul Parking System:

- Parking Management Software
- Android POS
- Automated Access control system
- Automated Fee systems configuration
- Statistical reporting software (Hourly, Weekly, Monthly & Annual)
Reports Includes:
 1. Revenue based
 2. License Plate recognition-based reports
 3. Access card based (Pre-paid, Post Paid)
- Real-time Vehicle counting
- Real time parking guidance display
- Video Surveillance
- DVR

System Development.

If you lack internal software development resources or expertise to support your business growth or digital transformation initiatives, Sourcenets is ready to take over your development projects (either the entire pipeline or its part) and ensure the effectiveness and transparency of our cooperation.

We develop mobile apps, APIs, custom software design, web apps, desktops apps.

Mobile Apps

We are a well-known company in terms of development of Mobile Applications for both Android and IOS operating systems, we develop mobile apps that will fit the intended need or requirements for your organization.

Our team of well trained and knowledgeable app developers on the Android and iOS platform create high quality, user-friendly, cost-effective mobile applications to meet our customer's expectations.

APIs

Given the importance and value that APIs represent for numerous businesses, it's important to consider API development company. The APIs that have the most value and use for the enterprise are more like products than code. We design APIs to be consumed by specific audiences (e.g., mobile developers).

Building APIs with the right logic and functionality fully in tune with the design can be challenging. Sourcenets can autogenerate your API's boilerplate code in 20+ languages from your API's design, allowing you to only focus on your API's core business logic. In case your development teams need to work on different modules of code together, you can always use contact us.

Custom Software

Whether your company needs a solution that will automate routine work of employees, store data/information or improve workflows, we develop Custom Software Solutions to the specification of our clients.

Web Apps

Whether you need a small brochure site, a complex database driven web application, or an e-commerce site we have the combined expertise in online marketing and technology to create a perfect website for your company.

Deployment of ICT Automation Systems.

Automation of any business process has never been easy, Sourcenets takes automation to another level. We do research, design and deployment of automation systems.

With many of our clients, we have realized that many of the day-to-day processes can easily be automated.

Sourcenets is a supplier and trainer for the Automate software packages, which allows the user to link, integrate and automate all sorts of business processes.

Data, Internet & Web Services.

The world is changing so fast, many cities in the world are looking forward to build smart cities to stay ahead of others. Connectivity, people and the internet are the major players to build up a digital economy, Sourcenets is dedicated to build digital infrastructure that will lead Africa to where it plans to be in 50 years to come.

Internet is a universal technology platform that allows any computer to communicate with any other computer in the world. Furthermore, one of the advantages of the internet is that nobody really 'owns' it. It is a global collection of networks, both big and small. These networks connect together in many different ways to form the single entity that we know as the internet.

The internet has revolutionized communication and thereby its contribution to information sharing. With access to a computer and an appropriate connection, anyone can interact with others worldwide; however, the web is designed to exchange unstructured information: while people can read web pages and understand their meaning, computers cannot.

Web services play a complementary and dominant role in building global IS for today's dynamic business world. Web services are self-contained, modular applications that can be described, published, located and invoked over a network.

Web services perform functions ranging from simple requests to complicated business processes. Once a web service is developed, other applications and other web services can discover and invoke the deployed service through universal description, discovery and integration. The idea of web service is to leverage the advantages of the web as a platform to apply it to the application services. We use them, not just to the static information.

We provide components and the services that can be used to build larger application services.

Knowing the critical roles of both internet and web services, Sourcenets is dedicated to provide a well reliable internet and web services in Africa as an infrastructure.

Revenue Collection Systems.

We have a comprehensive solution for the electronic collection of Government Fees, Taxes and Custom Duties. Our system serves as a means to achieve a cashless environment via the introduction of Virtual Funds and automates all revenue collection processes, allowing government agencies to exploit the full capabilities of the technology to transform its services to the public.

Our basic framework of the Electronic Revenue Collection separates the collection of cash and the actual collection of fees in the revenue collection process. Under this framework cash is collected at the beginning through trusted partners i.e. authorized banks and their branches. These trusted partners will either issue e-payment modes like e-wallet, scratch cards and e-vouchers or will reload these e-payment modes, against the cash payment.

Revenue Collection solution provides various electronic methods that enable the government to collect all revenues related to the governmental services, customs and taxes, etc.

E-Commerce.

People live a very busy life thus getting a time to go to the markets available in cities becomes difficulty, with the invention of e-commerce which is a way to buy and sell things via the internet makes it possible to shop things anywhere they are.

Ecommerce business models of all types are thriving. Sales from online stores are expected to increase 78% by 2020.

We build several types of e-commerce models including:

- B2B Ecommerce
- B2C Ecommerce
- C2C Ecommerce
- C2B Ecommerce
- Government / Public Administration Ecommerce

Payment Solutions.

Harness our payment gateway, a merchant service we provide to authorize credit card or direct payments processing for e-businesses, online retailers. Our main stakeholders include the customers, banks, mobile money operators (Africell, Gamcell, Qcell), Government agencies such as Water Agency, Electrical Agency and Municipalities etc.

Our payment gateway facilitates a payment transaction by the transfer of information between a payment portal (such as a website, mobile phone or interactive voice response service) and the front-end processor or acquiring bank.

ICT & Security Services.

Do you wonder how you can provide advanced security, compliance and visibility? Regardless of what their business size, industry and geography are, most organizations face similar challenges daily. However, with state-of-the-art tools, innovative technology and unmatched expertise, Sourcenets Managed ICT & Security services let you focus on your core business.

We offer highly specialized services for government agencies and corporate bodies providing industrial strength robust and confidential solutions to the highest expectation of international standards.

- IT Solutions Architects
- Hosted, highly secure government & corporate email
- Software & Hardware Management & Monitoring
- Cloud Computing & Hosting
- Business continuity/Disaster Recovery solutions
- Continuous data protection
